PLEASE REFER TO A.R.S. Wash.

CHICAGO October 9, 1940

Mr. W. P. Webber, Engineer,  
National Park Service,  
Department of Interior,  
7417 Interior Building,  
Washington, D. C.

Dear Mr. Webber:

We are pleased to enclose copies of the following recently released Standards of Underwriters' Laboratories, Inc.:

- 919 - Directional Signaling Systems for  
Automotive Vehicles
- 912 - Highway Emergency Signals
- 275 - Clearance, Marker, and Identification  
Lamps for Motor Vehicles
- 109 - Fittings for Automotive, Gas, Hazardous  
Liquid, and Refrigeration Appliances

We trust that this information will prove of value to your office. If we can, in any way, be of assistance, we most sincerely trust that you will not hesitate to call on us.

Yours very truly,

HUGH M. ROBINSON  
Service Engineer

Subject 6

May 20, 1952

To: Holders of the Standard for Rigid Steel Conduit

Subject: Length of Straight Conduit.

There were no adverse comments in connection with the Laboratories' bulletin of April 22 on this subject, in which some slight changes in the lengths of straight conduit (paragraph 42 of the Standard) were proposed.

There were a few suggestions that it would be appropriate to omit the 4-1/2 inch trade size, which is quite rarely manufactured. It is found, however, that this size continues to be mentioned in several places in the National Electrical Code -- it is shown in Section 3470 and also in Tables 4, 5, and 12 in Chapter 10 -- and, since this trade size is still permitted, it would seem advisable to retain the length and weight values for it in the Standard, so that the Laboratories' inspectors may have a complete basis for judging it, if it is submitted by any manufacturer for labeling.

42

Trade Size of Conduit in Inches	Length in Feet and Inches*	Minimum Weight in Pounds of Ten 10-Foot Lengths of Finished Conduit with Couplings Attached
1/4	9-11 1/4	38.5
3/8	9-11 1/4	51.5
1/2	9-11 1/4	79.0
3/4	9-11 1/4	105.0
1	9-11	153.0
1 1/4	9-11	201.0
1 1/2	9-11	249.0
2	9-11	334.0
2 1/2	9-10 1/4	527.0
3	9-10 1/4	690.0
3 1/2	9-10 1/4	831.0
4	9-10 1/4	982.0
4 1/2	9-10 1/4	1150.0
5	9-10	1344.0
6	9-10	1770.0

\* A tolerance of ±0.25 inch applies to the required length.

Subject 857

May 21, 1952

To: Holders of the Standard for Busways and Associated Fittings

Subject: New Edition of the Standard.

Accompanying this letter is a copy of the new May, 1952 edition of the Laboratories' Standard for Busways and Associated Fittings. This is the Third edition and supersedes the edition of November, 1950.

The new edition of the Standard has been prepared as a result of careful study of the subject by the Laboratories' staff; it has been reviewed by and discussed with the manufacturers of labeled busways and associated fittings, and with others known to have an interest in the requirements; and it has been approved by the Laboratories' Electrical Council.

With a few very minor exceptions, the changes in and additions to the Standard are those which were agreed upon at an industry meeting on busways at the Laboratories' New York office on November 30, 1951. The items in question were included in the Laboratories' bulletin letter of January 31, 1952.

The provisions of paragraphs 18-19 have been in effect since January 31 of this year, in accordance with the bulletin of that date.

The provisions of part (C) of paragraph 26, paragraphs 27, 29, and 82 will become effective on July 1, 1952.

Otherwise all of the provisions of the new Standard are in effect forthwith.

Subject 368

New York 13, N. Y.  
February 14, 1957

To: Electrical Council of Underwriters' Laboratories, Inc.,  
and  
Manufacturers of Electrically-Illuminated Frames

Subject: New Standard for This Classification

Accompanying this bulletin is a copy of the February, 1957 edition of the Laboratories' Standard for Electrically-Illuminated Frames. This is the first edition, since there have previously been no published requirements for this classification. The new edition becomes effective immediately.

The new Standard has been prepared as the result of careful study of the subject by the Laboratories' staff; it has been reviewed by and discussed with the manufacturers of listed electrically illuminated frames and with others known to have an interest in the requirements which this Standard contains; and it has been approved by the Laboratories' Electrical Council, which is comprised largely of inspection authorities throughout the United States.

This Standard consists of the preliminary draft which was bulletined out for review on November 21, 1956, with a slight change in paragraph 123 to indicate that the required marking is to be in the form of painted, stenciled, die-stamped, or indelibly-stamped lettering at least 1/8 inch high.
